---

Jon – request for paragraph to be included in geophysics report.

Thanks,

Tom

**Subject:** RE: FW: Historic Road Map (Wilcox)

I would like to request that in the text of the geophysics report this be summarized as part of our effort. Just add a paragraph or two related to the location of the road, the review of the geophysics transects, and the lack of evidence showing the presence of a road.

thanks

**Subject:** RE: FW: Historic Road Map (Wilcox)

Thanks, Beth. Makes sense the road would be on solid ground – following ridgelines/shallow bedrock. I guess the most important thing is that you did not see evidence of the road in any of our geophysics transects.

Thanks again,

Tom

Tom,

Attached is the bedrock elevation and soil thickness maps with the historical road shown. When you look at the bedrock elevation map you see a bend in the contours about where the road was... could be just a coincidence. I looked over the GPR profiles that were collected over the old road. I could not see a clear anomaly that could be the road. Is it possible that the rock surface was used as the road?

Beth

Jon/Beth –

I just rec'd the attached maps from Todd Downham (ODEQ) showing the where the "Old Road to Sapulpa" cuts across the site. We need to know if we see any evidence of this road from the geophysical survey data.

Tom,  
Attached is the map which shows the location of the historic road that goes through the site.  
Have a good day.
